

Please reject petition 04-160 and confirm FCC support of XM satellite radio's unique universal availability of instant Traffic and Weather coast to coast. Keeping satellite transmission of weather and traffic information for major metropolitan areas nationally available provides advance information to travelers throughout the United States. These XM program offerings are unique in that they are available to subscribers across the country, regardless of where they live or whether they may be "on the road."

I urge FCC representatives to reject petition 04-160 which would limit the scope and reduce the quality of information available to radio listeners. Thank you.
